DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I in the reply filed on 6/18/04 is acknowledged. The traversal is on the ground(s) that the inventions must be independent and distinct, and that "a serious burden" on the examiner must be shown by way of search or classification. This is not found persuasive because the claims are directed to four different species as shown in the requirement. Moreover, where an Election of Species is required, a separate search or classification need not be shown, and is not a requirement.

With regard to applicant's argument with respect to adding claims 8-14(i.e. Group II) with claims 1-7(i.e. Group I), the examiner would like to point out that the species of Group II is directed to a bi-directional system, whereas that of Group I is not.

The requirement is still deemed proper and is therefore made FINAL.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The

Art Unit: 2633

disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The disclosure is objected to because of the following informalities: On page 9, line 33, the word "nwere" should read as "were".

Appropriate correction is required.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 09/916,652. Although the conflicting claims are not identical, they are not patentably distinct from each other because the difference between the claims is in that the claims in the instant application are directed to a method, where as, the claims in the copending application are directed to an apparatus that can perform the method of the instant application. Therefore, the inventions are not independent and distinct.

Art Unit: 2633

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The art of record are cited for their teachings of optical communications systems that distribute video signals to subscribers.
